Maine
Brain Injury and Stroke
RESOURCE DIRECTORY
SIXTH EDITION
biausa.org/maine
The Maine Brain Injury and Stroke Resource Directory is intended to provide information and resources available to individuals with brain injuries or stroke. The fluid nature of services and service providers makes it likely that contact information and service availability will change and that some services and/or providers may not be included. It is the responsibility of the user to verify and investigate services and providers to determine the best options for your individual situation.

BIAA-Maine gratefully acknowledges partial support for the Maine Brain Injury and Stroke Resource Directory, Sixth Edition from Brain Injury Services, Office of Aging and Disability Services, Maine Department of Health and Human Services under contract ADS-20-9712.

BIAA-Maine gratefully acknowledges partial support from the Administration for Community Living (ACL), U.S. Department of Health and Human Services under Grant #90TBSG0046-01-00.

Disclaimer: The Brain Injury Association of America, Inc. (hereafter BIAA) and its Maine Chapter (hereafter BIAA-ME) have created this directory as a service to those in need of brain injury information and services. This directory includes paid advertising. BIAA and BIAA-ME do not endorse, recommend or guarantee any services or service providers listed in this directory and are not liable or responsible for any claim, losses or damages resulting from use of the agencies or services listed within this directory. The information contained in this directory is believed to be accurate but is not guaranteed. All content is provided “as is” without any warranty, expressed or implied. The Brain Injury Association of America – Maine Chapter (BIAA-ME)

BIAA-ME serves people of all ages who have sustained a traumatic or acquired brain injury from many causes, including but not limited to:

- Aneurysm and arteriovenous malformation (AVM)
- Anoxia
- Brain tumor
- Concussion
- Falls
- Hypoxia
- Hydrocephalus
- Ischemia
- Meningitis, encephalitis, and infections of the brain
- Opioid and other substance overdose
- Poisoning/Neurotoxic injury
- Sports injury
- Stroke
- Surgery

BIAA-ME SERVICES & SUPPORT

MAINE BRAIN INJURY INFORMATION CENTER

E-mail: MaineBrainInjuryInfo@biausa.org

BIAA-ME offers free personalized information, direction to available services, and support through the Maine Brain Injury Information Center. A toll-free phone call connects persons living with a brain injury, family members or friends, professionals, and the public with an experienced brain injury specialist. Inquiries may also be e-mailed.

NEURO-RESOURCE FACILITATION (NRF)

BIAA-ME provides the Maine Acquired Brain Injury Neuro-Resource Facilitation program, a service supported through a contract with the Maine Department of Health & Human Services, Office of Aging and Disability Services. Neuro-Resource Facilitation services are personalized to each individual’s situation using a collaborative process that involves...
participants (individuals living with a brain injury and their personal support systems) working together with BIAA-ME facilitators (individuals who provide assistance in navigating systems) to achieve agreed upon goals. It is more intensive than the information and resources provided through the Maine Brain Injury Information Center. To access BIAA-ME Neuro-Resource Facilitation services, e-mail NRFMaine@biausa.org.

SUPPORT GROUPS
BIAA-Maine hosts a statewide virtual support group currently held on the first Wednesday of each month. For more information, see the Resources and Support section of the website at biausa.org/Maine.

Brain injury support groups exist throughout Maine and serve to help Mainers living with a brain injury and their families to know that they are not alone. Being part of a strong local support network makes a huge difference in coping after you or a loved one sustains a brain injury. In addition to its statewide virtual support group, BIAA-ME helps link people with the support groups that are available through the Maine brain injury community.

BRAIN INJURY INFORMATION AND EDUCATION
BIAA-ME provides a wide variety of educational and informative resources for persons affected by brain injury and their families/caregivers and the professionals who serve them including an annual conference entitled Defining Moments in Brain Injury, access to BIAA webinars, booklets, brochures, and more. BIAA-ME reaches out to the hospitals in Maine to assist them in helping individuals make a smoother transition from the hospital. BIAA-Maine provides Brain Injury Fundamentals and Certified Brain Injury Specialist training throughout the state, offers educational programs for community service providers and cross-trains substance use disorder professionals about co-occurring brain injury and brain injury professionals about co-occurring substance use disorders.

SOCIAL, RECREATION AND OUTREACH PROGRAMS
BIAA-ME offers social and recreational programs when community interest and resources permit. BIAA-ME participates in community health fairs and other outreach programs to help raise awareness of brain injury and the services available for Mainers. For details and a current schedule, check the BIAA-ME website at biausa.org/mainе.

ADVOCACY
BIAA-ME fosters statewide advocacy to help the brain injury community work together to advocate for the services, supports, and funding needed by persons living with a brain injury and their families.

COMMUNITY AND INDIVIDUAL EVENTS TO RAISE AWARENESS AND FUNDS FOR BRAIN INJURY
BIAA-ME plans community events that offer individuals a way to help to raise awareness of brain injury as well as funds to support the services offered through BIAA-ME. Check the event calendar at biausa.org/mainе for details. If you are interested in holding an event to raise awareness and funds for brain injury in Maine, please e-mail development@biausa.org.

ABOUT BRAIN INJURY
Brain injury is a leading cause of death and disability in the United States. People who survive a brain injury face effects lasting from a few days to disabilities that last the rest of their lives. The severity of damage to the brain is a key factor in how a person will be affected after brain injury. The severity of a brain injury is classified as mild, moderate or severe based in large part on whether there is a loss of consciousness and how long that lasts.

Brain injury affects who we are and the way we think, act, and feel. It can change everything about us in a matter of seconds. The effects of a brain injury can be unpredictable, complex, and vary greatly from person to person. No two brain injuries are exactly the same. The effects of an injury depend on multiple factors including cause, physical location, and severity. Changes can be temporary or permanent, causing impairment or a complete disability. Each part of the brain serves a specific function and links with other parts of the brain to perform complex functions.
Brain injury can result in physical impairments such as speech, vision, hearing, headaches, paralysis, seizures, fatigue, and more. Cognitive issues like memory deficits, impaired concentration, slowed thinking, limited attention span, and impairments to perception, planning, writing, reading, and judgment are common after brain injury. Individuals may also experience emotional problems, such as mood swings, anxiety, depression, restlessness, lack of motivation, and difficulty controlling emotions.

Regardless of the severity of a brain injury, the early hours, days and weeks after injury can be confusing. A “good” day of progress may be followed by a “down” day. Setbacks are common and do not necessarily imply a permanent reversal of gains made. Individuals living with brain injuries may not be fully aware of the impact of their injuries. Recovery is often an unpredictable process involving time, specialized brain injury therapies and services, and family/community support.

After a brain injury, family and friends become an integral part in the life-long journey of the survivor. Learning a new language filled with medical and rehabilitation terms is often necessary to understand what happened, what services are available, and how services help persons with brain injury recover. Digested information about the outcome of the brain injury, making the right decisions for accurate treatment for a successful recovery, acquiring benefits, planning for the future, and accepting this new situation can be very stressful for everyone who is involved.

The Maine Brain Injury and Stroke Directory lists resources available to Mainers who have experienced brain injury and their families to assist in navigating through the maze of needed services.

**BRAIN INJURY DEFINITIONS**

**ACQUIRED BRAIN INJURY**

An acquired brain injury (ABI) is an injury to the brain, which is not hereditary, congenital, degenerative, or induced by birth trauma. An acquired brain injury is an injury to the brain that has occurred after birth.

Common causes of ABI include stroke, near drowning, hypoxic or anoxic brain injury from opioid and other substance overdoses or near-drowning, tumor, neurotoxins, electric shock or lightning strike.

**TRAUMATIC BRAIN INJURY**

A traumatic brain injury (TBI) is defined as an alteration in brain function, or other evidence of brain pathology, caused by an external force. Common causes of a TBI include motor vehicle crashes, sports injuries, assaults, and falls.

**CONCUSSION**

A concussion is a type of TBI caused by a bump, blow, or jolt to the head or by a hit to the body that causes the head and brain to move rapidly back and forth. This sudden movement can cause the brain to bounce around or twist in the skull, stretching and damaging the brain cells and creating chemical changes in the brain.

A concussion may be called a mild traumatic brain injury because concussions are usually not life threatening. Even so, the effects of a concussion can be serious. Concussions can occur in any sport or recreational activity, from falls or other activities where a bump, blow or jolt to the head occurs. Concussions may or may not involve loss of consciousness, can result in memory loss for events immediately before or after trauma, and can result in neurological deficits that may or may not be permanent.

Concussion is not always recognized as a brain injury. It is not always diagnosed and subsequent problems that a person may have are not always associated with the concussion.

**STROKE**

A stroke occurs when blood flow to the brain is interrupted and the brain does not get the oxygen it needs, often with devastating consequences. Hemorrhagic strokes are caused by a burst blood vessel in the brain. Ischemic strokes are caused by blood clots that block blood flow to part of the brain.

Some people experience TIAs (transient ischemic attacks) or “mini-strokes” that result from a temporary
blood clot. A TIA is often a warning sign that a stroke is likely to occur and should be taken seriously. While a stroke is most common in older adults, children and young adults also experience strokes. The severity of a stroke is often assessed using the National Institutes of Health (NIH) Stroke Scale.

MAINE BRAIN INJURY SUPPORT GROUPS

Support groups, even virtual ones, are a great resource for persons living with a brain injury, family members, and caregivers to share with and learn from others who face similar challenges. Each support group is different because it serves to meet the needs of those participating at any given time. Support groups may offer presentations about various aspects of brain injury, opportunities to share experiences and get support and suggestions from others in the group, social or recreational activities, and more.

Please note that contacts, dates and times frequently change especially as a result of the Covid-19 pandemic; we recommend you reach out to the group facilitator to confirm details prior to attending a group meeting for the first time. Please check the BIAA-ME website at biausa.org/maine to check for changes.

VIRTUAL SUPPORT GROUPS

BIAA-MAINE STATEWIDE SUPPORT GROUP
First Wednesday of the month, 11–12 noon
Phone: 207-522-6601

Hope Association
85 Lincoln Ave.
Rumford, ME
First Tuesday of the month, 5-6:30 p.m.
Phone: 207-364-4561
Catherine Johnson

BRAIN INJURY FUNDAMENTALS

Brain Injury Fundamentals is a training and certificate program designed by the Brain Injury Association of America (BIAA) to address the unique needs and challenges of those who care for or encounter individuals living with a brain injury. This includes non-licensed direct care staff, facility staff, family members, friends, first responders, and others in the community. The training course covers essential topics such as:

- Cognition
- Guidelines for interacting and building rapport
- Brain injury and behavior
- Medical complications
- Safe medication management
- Families coping with brain injury

The Brain Injury Fundamentals course is grounded in adult learning principles to maximize participant engagement and application through an interactive workbook. Using real-life scenarios to anchor the course concepts, participants learn about the challenges people face following brain injury and the types of support they need. This essential program will help family caregivers and direct support professionals understand different behaviors, manage medication safely, and provide support to families and friends.

For more information, visit: biausa.org/fundamentals

211 MAINE

During personal hardships and emergencies, 211 Maine can help you find programs and services that will assist you with basic needs such as transportation, food and clothing banks, shelters, financial and rental assistance, household goods, and utility assistance. 211 Maine operators can also connect individuals to help on domestic violence issues, substance use disorder treatment, education, employment, and more.

Dial 211, text your zip code to 898-211, email info@211maine.org, or visit 211maine.org
INSURANCE & FINANCIAL ASSISTANCE

After a brain injury, assistance with paying for the costs of medical, rehabilitation, community and long-term care and other financial obligations is often needed. Depending on an individual's unique situation, one or more Federal and state options may be available to assist.

The best way to find out if you are eligible for any available program or benefit is to apply as soon after an injury as possible. If you are denied eligibility, be sure you understand why. Sometimes, amending the application or appealing the decision will be successful.

IMPORTANT FEDERAL INSURANCE & FINANCIAL ASSISTANCE PROGRAMS

PATIENT PROTECTION AND AFFORDABLE CARE ACT
Toll Free: 800-318-2596
Website: healthcare.gov

The Patient Protection and Affordable Care Act put in place comprehensive health insurance reforms that have improved access, affordability, and quality in health care for Americans. Any individual who is not eligible for Medicare may purchase a health insurance policy through Maine’s federally-facilitated Marketplace.

To find Patient Protection and Affordable Care Act health insurance plan options in Maine, contact:
Maine Bureau of Insurance
34 State House Station
Augusta, ME 04333-0034
Phone: 207-624-8475
Toll Free: 800-300-5000
TTY: Maine Relay 711
Website: maine.gov/pfr/insurance

MEDICARE
Medicare is a health insurance program available through the Centers for Medicare and Medicaid Services (CMS). While most commonly used by people age 65 or older, younger people with disabilities
resulting from brain injury and stroke may be eligible for Medicare. Medicare helps pay for health care costs but does not pay for all expenses or for long-term care.

SOCIAL SECURITY INCOME

Toll Free: 800-772-1213
Website: ssa.gov
Online forms: socialsecurityofficenear.me/in/state/me

The Social Security Administration manages two cash benefit programs for people with disabilities. More than 60% of first-time applications for these programs are denied, so be prepared to appeal the denial and consider engaging a disability attorney to advocate on your behalf. There are multiple steps in the appeal process, beginning with a request for reconsideration, moving to a hearing before an administrative law judge (an ALJ), and ultimately, if needed, a hearing in Federal court. The success rates for people who have a hearing before an ALJ are nearly 60%, largely because applicants have representation from a disability attorney or a non-attorney disability advocate.

Social Security Disability Insurance (SSDI) provides disability insurance benefits for workers who have contributed to Social Security and become disabled or blind before reaching retirement age.

Supplemental Security Income (SSI) provides monthly cash income to low-income persons with limited work history and resources on the basis of age and disability. Apply online for benefits or contact the local office to apply in person. Social Security offices in Maine can be found below or use the Social Security Office Locator at ssa.gov/locator.

IMPORTANT STATE OF MAINE INSURANCE & FINANCIAL ASSISTANCE PROGRAMS

MAINECARE – HEALTH INSURANCE

Office of MaineCare Services
11 State House Station
Augusta, ME 04333-0011
Toll Free: 855-797-4357
TTY: Maine Relay 711
Website: maine.gov/dhhs/oms

MaineCare (Maine’s Medicaid Program) is a health insurance program managed by the Maine Department of Health and Human Services (DHHS). It pays for the medical expenses of people who are unable to pay some or all of their own medical expenses. MaineCare eligibility is based on income, age and family situations. MaineCare sends payments directly to health care providers rather than the person receiving services. A co-payment (a payment for a portion of the cost of some medical services made by the person receiving services) may be required.

MaineCare has services available to qualifying individuals 18 years and older who have sustained an acquired brain injury. In Maine, a qualifying acquired brain injury is an insult to the brain resulting directly or indirectly from trauma, infection, anoxia, or vascular lesions, and not of a degenerative or congenital nature, but which may produce a diminished or altered state of consciousness resulting in impairment of cognitive abilities and/or physical functioning. It can also result in the disturbance of behavioral or emotional functioning. These impairments may be either temporary or permanent and cause partial or total functional disability or psychosocial maladjustment. This does not include brain injuries that are induced by birth.

Children under age 19 with serious health conditions, such as severe brain injury, may be eligible for MaineCare through the Katie Beckett benefit even when the family income is higher than MaineCare limits.

To apply for MaineCare, contact the Maine Department of Health and Human Services or visit a local office. An eligibility specialist will help determine whether you are eligible for MaineCare and answer questions about the application process and benefits.

MY MAINE CONNECTION

Office for Family Independence
Maine Department of Health and Human Services
Toll Free: 800-442-6003
Website: maine.gov/mymaineconnection

Through My Maine Connection, information and applications for a wide range of programs and services offered by the State of Maine is available. These include MaineCare, Food Supplemental Nutrition Assistance Program (commonly known as the food stamp program or SNAP), Temporary Assistance for Needy Families, a Child Care Subsidy program, and more. Eligibility requirements vary by program.

WORKERS’ COMPENSATION

Maine Workers’ Compensation Board
442 Civic Center Dr., Suite 1 (Physical address)
27 State House Station (Mailing address)
Augusta, ME 04333-0027
Phone: 207-287-3751
Toll Free: 888-801-9087
TTY: Maine Relay 711
Website: maine.gov/wcb

Workers’ compensation is a type of insurance provided by employers for workers who are injured on the job. Benefits include but are not limited to payments for lost time from work due to an injury, payment of medical bills, drug prescriptions and related costs and vocational rehabilitation. If you are injured at work, you must report the injury to your employer. Maine has five regional Workers’ Compensation Board offices located in Augusta, Bangor, Caribou, Lewiston and Portland where you can get more information about Maine’s workers’ compensation laws and practices.
GUIDING PRINCIPLES WHEN SELECTING A BRAIN INJURY REHABILITATION PROGRAM

Careful selection of the services that best meet the needs of the persons with brain injury and their families is a critical step toward achieving maximum recovery. An equally vital step is to participate actively in the decision-making about the services being provided and monitoring service delivery whether in the hospital, rehabilitation facility, community residence or other settings.

Active and ongoing participation means you will be better prepared to make solid, informed decisions and to maximize available resources.

Be Curious and Ask Questions
While you know your loved one best, you are likely not familiar with the wide range of programs, services, resources, and information in the brain injury rehabilitation field. Learn as much as you can about any program that might be appropriate for your loved one by asking questions about its staff, service philosophy, history, and method of collecting outcome data. If you do not understand something, ask someone at the program to explain it in the detail you need. Like medicine, brain injury services are often as much an "art" as a "science" and can vary widely from program to program.

Learn From Others
When researching multiple programs and services, try to talk with individuals who have participated in each one. Support groups are often a good way to find people who have had experience with a program you are considering. Ask the facility or organization to provide references of individuals who have used their services. Sometimes, due to privacy concerns for those receiving services, you may not always be able to get references.

In many states, consumers can access information about the quality and performance of programs and facilities that are licensed or accredited. Ask prospective facilities how to obtain outcome data and quality information about their program.

You can also check out the program or service provider online, keeping in mind that those who have had negative experiences are most likely to complain, and their experiences may not be fully representative of the quality of a given provider.

Explore More Than One Program
Whenever possible, thoroughly consider several options. The closest program or the one that offers the most services may not necessarily be the best for your loved one’s individual needs. Be wary of anyone who tries to pressure you while paying attention to any time constraints that may result from limited availability or time-limited access to benefits. Remember that the quality of services cannot be judged solely by how nice the facilities or marketing materials appear.

Get It in Writing
Keep a log of who you spoke to, the date, time, and a summary of your conversation. Keep copies of all correspondence. There will be a lot of information, including new and technical terms to process, so it is easy to forget details. You may wish to record your conversations so you can refer to them later. Be sure to ask permission in advance; most professionals will readily agree to be recorded. Get any commitments in writing of the types, quantities, and costs of services to be provided before you finalize your decision.

Know Your Financial Situation
Find out about public or private benefits your loved one may be eligible for and apply promptly. Depending on what kind of services are needed, talk with your insurance carrier, managed care long, and under what conditions. Ask about deductibles and co-payments. Get a copy of your insurance policy or health plan and re-read it. Find out the extent of your financial obligations. Ask about the long-term implications of decisions you make today.

Before services begin, be prepared to fight denials by your insurance company. “No” does not always mean “no.” BIAA has published a free guide called “Navigating the Insurance Maze” that can be downloaded at biausa.org/insurance. Be prepared for ongoing negotiations with insurance representatives.
and contact the BIAA affiliate in your state to be referred to advocates who can help.

Get a written disclosure statement from the provider before services begin. The statement should document what services will be rendered and exactly who will be responsible for payment, co-pays, and deductibles. Get regular updates about where you stand financially with the payer and the service provider(s).

Be Involved, Stay Involved
The ultimate goal is to help your loved one succeed. Brain injury programs and services should promote self-determination and community integration to the fullest extent possible. Self-determination can be achieved by deciding how you wish to use your and your loved one’s time, energy and resources. Voice your opinions, questions, and concerns promptly and respectfully.

Choosing brain injury programs and services may be the single most important decision you make emotionally, financially, and for your loved one’s outcome. Take the time to make good decisions. Once services begin, stay on top of what is being provided and what other options exist. Be an informed consumer.

Excerpted from Moderate to Severe Brain Injury: A Practical Guide for Families, ©2018 Brain Injury Association of America, Inc.

Appendix A provides a list of questions that may be helpful as you consider different program and service options.

BRAIN INJURY MEDICAL, REHABILITATION & COMMUNITY PROGRAMS

Brain injury program providers in Maine offer a diverse range of medical and rehabilitation services on an inpatient, outpatient, transitional residential, and community basis for adults and children. Some of the providers below are also service providers for State of Maine Medicaid Waiver and other programs so you will find them listed more than once in this directory.

Home & Community
Home and community therapy blends evidence based therapies with creative uses of the patients own surroundings - whether at home, school, work or in their own community. Our Home & Community clinical teams have expertise in the treatment of TBI, ABI, CVA, SCI, PCS, all other neurological diagnoses, amputation and complex orthopedic injuries. This leads to rapid and lasting functional independence and patient success.

Our home and community treatment programs accept patients from the following areas: York, Cumberland, Androscoggin and part of Sagadahoc and Oxford counties.

Rebuilding lives through hope, compassion, and dedication to excellence.
In the aftermath of a brain injury, the injured person and his or her family often need to seek the advice of an attorney. Medical treatment, such as brain injury rehabilitation, and long-term care services are expensive and may span many years. Individuals and families must address and make decisions on financial issues, estate planning, returning to work or school, establishing guardianship or a power of attorney, and other issues.

BIAA provides an interactive directory of Preferred Attorneys with experience handling brain injury cases. The directory is available on BIAA’s website, and users may search for a local preferred attorney specializing in one of three practice areas: personal injury, civil rights, and financial issues. Visit biausa.org/preferredattorneys or call the BIAA-Maine Brain Injury information Center toll free at (800) 444-6443 to find a lawyer who understands brain injury and is qualified to assist you and your loved one.

Excerpted and adapted from Moderate to Severe Brain Injury: A Practical Guide for Families, ©2018 Brain Injury Association of America, Inc.

Appendix B is a guide to help with selecting legal representation in the event that is helpful or necessary in your situation.

DRIVING EVALUATION AND CONSULTANTS

Individuals who have sustained a brain injury sometimes find that their driving skills are no longer the same. Family, friends, and caregivers may worry about whether a person living with a brain injury can drive safely. Because we take our driving skills for granted, it is easy to forget that driving is the most dangerous thing we do in our everyday lives. We might even think of it as the ultimate multitasking experience.

Brain injury can affect the many physical, cognitive, and behavioral skills needed to drive well, depending on the individual and the type of injury. Some states require physicians to report to the authorized state licensing agency if they have a patient for whom driving may no longer be safe. Other states require licensed drivers to report any change in medical status before they resume driving.

A driving evaluation is a crucial step in determining a person’s ability to drive following recovery from brain injury. An individual may be referred for an evaluation and/or training through an inpatient rehabilitation program, a state-supported program, a private vocational counselor, or the Department of Veterans Affairs. In some cases, the program or organization making the referral can also cover the cost of the evaluation and any training that follows. Health insurance does not usually cover the cost of a driving evaluation.

NEUROPSYCHOLOGISTS
A neuropsychologist is a psychologist with specialized training in relationships between the brain and behavior. Neuropsychological testing is often recommended after a brain injury to identify strengths and weaknesses in a person’s thinking skills. It involves tests that provide a baseline measure of a person’s abilities. The testing also suggests ways to improve strengths while working around areas of weakness.

Neuropsychological services are also available at many of the programs listed under Brain Injury Medical, Rehabilitation and Community Programs.

SPEECH AND LANGUAGE THERAPY
Speech and language therapy is the assessment and treatment of communication problems and speech disorders, which may occur after acquired brain injuries. It is performed by speech-language pathologists (SLPs), commonly referred to as speech therapists.
STATE OF MAINE BRAIN INJURY AGENCIES & SERVICES

MAINE DEPARTMENT OF HEALTH AND HUMAN SERVICES
221 State St., 11 State House Station
Augusta, ME 04333-0011
Phone: 207-287-3707
TTY: Maine Relay 711
Website: maine.gov/dhhs

The Maine Department of Health and Human Services includes many agencies that provide services and benefits to individuals living with a brain injury, stroke, and other disabilities. Some of the most important ones are listed below. Be sure to ask about other services, benefits or programs that may be available to meet your needs when meeting with an eligibility specialist at a local office or calling for information.

OFFICE OF AGING AND DISABILITY SERVICES
Maine Department of Health and Human Services
SHS #11, 41 Anthony Ave.
Augusta, ME 04333
Phone: 207-287-9200
TTY: Maine Relay 711
Website: maine.gov/dhhs/oads

The Maine Office of Aging and Disability Services (OADS) is the primary Maine state agency that supports Mainers living with a brain injury. In addition to services specifically designed for individuals living with brain injuries and their families, OADS provides adult protective, intellectual and developmental disability, long-term care, and aging and community services to the people of Maine. It is a division of the Maine Department of Health and Human Services. Through its online MaineLink pre-screening application, OADS works to link Mainers with brain injury and other disabilities to available services.

Acquired Brain Injury Advisory Council
The Maine Acquired Brain Injury Advisory Council (ABIAC) provides independent oversight and advice and makes recommendations to the commissioner of the Maine Department of Health and Human Services. For more information, contact:

Maine Acquired Brain Injury Advisory Council
Maine Department of Health and Human Services
c/o OADS
41 Anthony Ave.
Augusta, ME 04330
Phone: 207-287-3707
TTY: Maine Relay 711
Website: maine.gov/dhhs

Maine State Brain Injury Services
For individuals living with brain injuries and their families, Maine offers the following specific programs to those meeting functional and financial eligibility criteria. Please note that, except for the Outpatient Neurorehabilitation Services, you must first be eligible for MaineCare to access the following State of Maine services:

- Brain Injury Waiver (Home and Community Based Services for Adults with Brain Injury)
- Other Related Conditions Waiver (Home and Community Based Services for Adults with Other Related Conditions)
- Outpatient Neurorehabilitation Services
- Nursing Facility Acquired Brain Injury Services

BRAIN INJURY WAIVER: HOME AND COMMUNITY BASED SERVICES FOR ADULTS WITH BRAIN INJURY (SECTION 18)
Office of Aging and Disability Services
Maine Department of Health and Human Services
Phone: 207-287-9200
(Ask to speak to someone in Brain Injury Services)

The Maine Brain Injury Waiver Program may provide community-based services instead of placement in an institutional setting to eligible people who are age 18 or older with an acquired brain injury through a MaineCare package of benefits known as the Maine Brain Injury Waiver. This program is called the “Maine Brain Injury Waiver Program” because
the Federal government has granted a waiver of the program requirements for Medicaid to the State of Maine to offer community-based services rather than institutional services. Community services available include assistive technology, care coordination, community/work reintegration, home support, non-medical transportation, career planning, and more.

To apply, an assessment by a neuropsychologist or physiatrist is required to determine eligibility. Once a completed application is received, OADS makes a referral to the Assessing Services Agency (ASA) to determine medical eligibility. Once medically eligible, the individual will be placed on a wait list. Once a person is awarded a funded offer and is able to start services under the Brain Injury Waiver, a person-centered plan will be developed with OADS staff.

**HOME AND COMMUNITY BASED SERVICES FOR ADULTS WITH OTHER RELATED CONDITIONS (ORC) (SECTION 20)**

**Office of Aging and Disability Services**
Maine Department of Health and Human Services
Phone: 207-287-9200

MaineCare offers a package of benefits to eligible people who are who are age 21 or older, with cerebral palsy, epilepsy, or any other condition other than mental illness, that requires treatment similar to persons with intellectual disabilities, is likely to continue indefinitely, and results in substantial functional limitation in three or more major life activities (e.g. self-care, learning, understanding and use of language, or mobility).

It provides community based services instead of placement in an institutional setting. This program is commonly called the “Other Related Conditions Waiver.”

Community services available include home support, physical, occupational and/or speech therapy, community and work supports, assistive technology, and more. In order to be eligible for the benefits in this package, an individual must meet the criteria to receive services in an Intermediate Care Facility for Individuals with Intellectual Disabilities (ICF-IID). After an application is received, an assessment will be conducted to determine eligibility. If the person is determined to be eligible for this waiver program, the individual will be placed on a wait list. Once a person is awarded a funded offer and is able to start services under the Other Related Conditions Waiver, a person-centered plan will be developed with OADS staff.

**Additional Maine Medicaid Waiver Programs**

In addition to the Maine Brain Injury Waiver Program, the State of Maine offers a number of other Medicaid waiver programs for individuals eligible for MaineCare (e.g., Home and Community Benefits for the Elderly and Adults with Disabilities, Residents of Nursing Facility, and Residents of Residential Treatment Facilities).

Be sure to ask about the eligibility requirements and benefit packages for these so you can choose the one that is best suited to meet your needs.

**Outpatient Neurorehabilitation Services (Section 102 Clinics)**

Eight outpatient neurorehabilitation treatment clinics are available throughout the State of Maine paid for through MaineCare to offer physical, occupational and speech therapies and other services to help individuals living with a brain injury recover their physical, communicative, and cognitive abilities through a person-directed or person centered plan of care.

To be considered for this State of Maine service, eligibility for MaineCare and a diagnosis of brain injury are required. The clinic will assist in setting up an outpatient neurorehabilitation program. Individuals who are not eligible for MaineCare may also receive services from the programs listed below.
SKILLED NURSING FACILITY
ACQUIRED BRAIN INJURY SERVICES

In Maine, two facilities provide skilled specialized brain injury nursing care funded by MaineCare. A functional assessment is required along with documentation from a physician or neuropsychologist. For more information, contact:

Office of Aging and Disability Services
Maine Department of Health and Human Services
Phone: 207-287-9200

**PRESCRIPTION DRUG DISCOUNT PROGRAMS**

**MAINE LOW COST DRUG PROGRAM FOR THE ELDERLY AND DISABLED AND MAINE RX PLUS**

**Maine Department of Health and Human Services**
Toll-free phone: 1-866-796-2463
TTY/TDD: 207-287-1828

The Maine Low Cost Drug Program for the Elderly and Disabled (DEL) offers greatly reduced prescription drug and some over-the-counter drug costs for individuals age 62 and greater and to individuals age 19 and older who meet eligibility requirements based on disability and income/asset limits.

Maine Rx Plus is available to all Maine residents based on income/asset eligibility requirements only and offers drugs at a discount.

Apply online at My Maine Connection or visit a local Maine Department of Health and Human Services office.

**EMPLOYMENT & VOCATIONAL ASSISTANCE**

**VOCATIONAL REHABILITATION (VR)**

Vocational Rehabilitation (VR) is a program that helps people who have physical, mental, or emotional disabilities to get and keep a job. Register at the local Bureau of Rehabilitation Services as soon as possible, because funding for this service is limited, and there may be priority categories and waiting lists for VR services. Students with brain injuries who are receiving special educations services are encouraged to register with the VR agency two years before high school graduation or before they turn age 21 to allow the VR counselor to participate in transition planning meetings.

The U.S. Department of Labor’s Division of Employment and Training has One-Stop Career Centers in every state, including Maine. Services of these centers are available for anyone who wants to work. The centers provide assistance in career exploration, training and job searches.

PROTECTION AND ADVOCACY FOR BENEFICIARIES OF SOCIAL SECURITY (PABSS)

The PABSS agency in Maine is:

Disability Rights Maine
160 Capitol St., Suite 4
Augusta, ME 04330
Phone: 207-626-2774
Toll Free: 800-452-1948
Website: drme.org

DRM provides the following services: information and referral, individual advocacy, legal representation, education and training, and assistance with self-advocacy. DRM welcomes calls from people with disabilities inquiring about their legal rights however, DRM does not advise landlords, schools, businesses, or providers of accommodations or services.

PABSS is a free service in every state funded by Social Security that serves SSI/SSDI beneficiaries who want to work by helping to remove barriers to employment. PABSS can help answer questions and solve problems that make it hard for a beneficiary to find, keep a job, or reach an employment goal.

SENIOR COMMUNITY SERVICE EMPLOYMENT PROGRAM

The Senior Community Service Employment Program (SCSEP) helps qualified older workers (age 55 and older) identify part-time training positions in public or 501(c)3 non-profit organizations in the local community. The program is intended to offer a “stepping stone” back into the workforce. It is a transitional program; positions are not intended to be permanent, and all assignments are temporary.

There is a waiting list for this program. It is not available in Lincoln or Cumberland Counties; limited services in York County.

Associates for Training and Development (A4TD)
Phone: 800-439-3307

TICKET TO WORK PROGRAM

Bureau of Rehabilitation Services
Maine Department of Labor
150 State House Station
Augusta, ME 04333-0150
Phone: 207-623-7961
Toll Free: 800-698-4440
TTY: 888-755-0023
Website: maine.gov/rehab/ticket/index.html

People over age 18 who receive Social Security assistance may be eligible for a program known as
Ticket to Work. The goal of this program is to increase opportunities and choices for Social Security disability beneficiaries to obtain employment, vocational rehabilitation, and other support services. This program removes many of the barriers that made it difficult for people to go to work because their earned income would mean a loss of Medicaid benefits. The Social Security Administration automatically sends eligible students a “ticket” for this program. The ticket is valid at VR agencies as well as at other service providers.

INDEPENDENT & COMMUNITY LIVING

INDEPENDENT LIVING SERVICES PROGRAM

Bureau of Rehabilitation Services
Maine Department of Labor
Website: maine.gov/rehab/dvr/independent_living.shtml

The Maine Independent Living Services program assists people who have significant disabilities to live more independently in their homes and communities. Services may include but are not limited to: independent living skills training, home and vehicle modification, augmentative communication devices, mobility training and counseling. Funding for this program comes from the Federal government and is limited, so you may find that there is a waiting list for these services. Be sure to apply as soon as possible if you require this service. The program is provided under a contract from the State of Maine to Alpha One, with locations in Bangor, South Portland, and Presque Isle.

Centers for Independent Living

Centers for Independent Living (CILs) provide services to maximize the independence of individuals with disabilities and the accessibility of the communities in which they live. Core CIL services include: advocacy, independent living skills training, information and referral and peer counseling. Many CILs also help people find housing and personal care assistance. Maine has three CILs operated by Alpha One in Bangor, South Portland, and Presque Isle.

ASSISTIVE TECHNOLOGY & Adaptive EQUIPMENT

Assistive technology (AT) and adaptive equipment includes items, equipment, apps and software programs, or other products that are designed to increase, maintain, or improve the functional capabilities of persons with disabilities. Examples include communication boards, power lifts, wheelchairs, adapted vehicles, eye-gaze trackers, environmental controls, and smart home technology. In addition to improving safety, communications and environmental control, these devices promote greater independence by helping people accomplish tasks that were previously impossible or very difficult to perform.

The service providers listed below may provide or assist with the identification, modification, funding and/or acquisition of the AT that can make everyday life easier after a brain injury. Many offer loaner devices, device demonstrations, and device reuse.

COMMUNICATION ASSISTANCE SERVICES

MAINE RELAY – DIAL 711
Disability Rights Maine-Deaf Services (DRM)
68 Bishop St., Suite 3
Portland, ME 04103
Phone/TTY: 207-797-7656
Contact: Elaine Williams, ewilliams@drme.org
Toll Free/TTY: 800-639-3884
Website: drme.org/deaf-services/commtech
Website: hamiltonrelay.com/state_711 Relay/state.html

The Maine Relay Service is a free service available 24 hours a day, 365 days a year that provides a communications link between those who use a standard voice telephone and those who use specialized telephone equipment or assistance because they are deaf, hard of hearing, or have a speech or physical disability that prevents use of a standard telephone.

Specialized telecommunications equipment may be a Text Telephone (TTY), a telebraille telephone for someone who is deaf-blind, or other type of equipment to address a specific communication disability. There is no extra charge for the relay service. All calls are confidential and no record is kept of calls.

When a call is placed through the Maine Relay Service, a Communication Assistant (CA) provides the needed communication link between the two parties.

## HOUSING

### 211 MAINE

211 Maine is a free, confidential information and referral service that connects people of all ages across Maine to local services. 211 Maine is based in Maine and available 24 hours a day, seven days a week.

It can provide access to local emergency shelters; safe, affordable housing; new housing; energy and other utility assistance; or financial support for home repairs, and support services for people who are currently homeless.

**Dial 211 or text your zip code to 898-211 to connect with a Maine-based Specialist today.**  
Website: 211maine.org

### MaineHousing – Subsidized Housing

**Maine State Housing Authority**  
26 Edison Dr.  
Augusta, ME 04330  
Phone: 207-626-4600  
Toll Free: 800-452-4668  
Website: mainehousing.org/programs-services/rental/subsidized-housing

MaineHousing is an independent state agency that bridges public and private housing finance, combining them to benefit Maine’s low and moderate-income people. Financing from MaineHousing and other government sources has resulted in affordable apartments having been developed across Maine. In most cases, the rents for these apartments are pre-set. In some cases, the tenant pays a portion of their income towards rent. Eligibility requirements and income limits vary by property.

### RENTAL HOUSING

**Mainehousingsearch.org**  
Toll Free: 1-877-428-8844  
Website: mainehousingsearch.org

Mainehousingsearch.org is Maine’s free rental listing service. It’s fast and easy to use and includes detailed listings with pictures, maps, and more. Listings are updated daily.

### SECTION 811 SUPPORTIVE HOUSING FOR PERSONS WITH DISABILITIES

The Section 811 Supportive Housing for Persons with Disabilities program is a Department of Housing and Urban Development (HUD) supportive housing program that assists the lowest income people with significant and long-term disabilities to live independently in the community by providing affordable housing linked with voluntary services and supports.

The Section 811 PRA (Project Rental Assistance) is a HUD-funded program providing rental assistance to eligible, extremely low income, disabled individuals between the ages of 18 and 62. The program is a partnership between MaineHousing and the Department.
Applicants for 811 PRA Housing must also be eligible for home-based services provided through OADS.

Section 811 PRA (project rental assistance) is a HUD-funded program providing rental assistance to eligible, extremely low income, disabled individuals between the ages of 18 and 62. The program is a partnership between MaineHousing and the Department. Applicants for 811 PRA Housing must also be eligible for home-based services provided through OADS.

Applicants must be extremely low-income (30% of AMI or below), and the household must include at least one individual with a disability who is 18 years of age or older but less than 62 years of age who has a disability. Applicants must also be eligible for community-based, long-term care services as provided through the five MaineCare waivers: Sections 18, 19, 20, 21 and 29.

MaineHousing has assistance for approximately sixty (60) 811 PRA units in four Regions: Bangor, Augusta, Lewiston/Auburn, and Portland. However, MaineHousing will also expand the geographical selection to include parts of Aroostook County. Information can be found at MaineHousing’s website: mainehousing.org/programs-services/rental/rentaldetail/section-811-pra.

LIBRARY SERVICES

SUBSTANCE USE AND BRAIN INJURY

The use of legal or illegal drugs increases the risk of an acquired brain injury. Substance use disorder (SUD) is a disease that affects a person’s brain and behavior and leads to an inability to control the use of a legal or illegal drug or medication. It results when addiction causes changes in the brain’s wiring, causing people to have intense cravings for the drug, making it hard to stop using the drug, despite life-threatening consequences.

Individuals with traumatic brain injury are at an increased risk for substance use disorder (SUD) as they have exposure to multiple risk factors:

- High rates of chronic pain
- Higher risk for pre and post substance abuse
- Injury related behavioral changes
- Over prescribing of opioids
- Treatment barriers

Due to these risk factors, individuals with traumatic brain injury are 11 times more likely to die of accidental poisoning or overdose. Professionals recognize that there is an increased risk for addiction or relapse post brain injury. Cognitive issues, depression, and decreased socialization can make these individuals more vulnerable.

COMMONLY MISUSED SUBSTANCES CAN INCLUDE:

- Opiates and other narcotics, including heroin, fentanyl, oxycodone, opium, codeine, and narcotic pain medications that may be prescribed by a doctor or purchased illegally
- Stimulants, including cocaine, methamphetamine, and amphetamines
- Depressants, including alcohol, barbiturates, benzodiazepines, chloral hydrate and paraldehyde LSD (“acid”), psilocybin (“mushrooms”), and PCP (“angel dust”)
- Marijuana

NON-LETHAL OPIOID OVERDOSE AND ACQUIRED BRAIN INJURY

It has been suggested that the opioid crisis is a nationwide public health emergency; an epidemic that is the deadliest drug crisis in American history. Opioids are the leading cause of death for Americans under 50 years of age. The 2018 data showed that each day, more than 140 Americans lost their lives due to overdoses.

Non-lethal overdose can result in permanent brain damage. Opioids (or opiates) are depressants, slowing down a person’s breathing and heart rate; in other words, an overdose causes the body to forget to breathe on its own. When that happens, an individual can sustain either a hypoxic brain injury (not enough oxygen) or an anoxic (no oxygen) brain injury. These types of brain injuries can cause a multitude of side effects, including loss of short term memory, difficulty concentrating, vision and/or hearing loss, loss of coordination and balance, issues with sequencing, problems with communication, and behavioral changes. The longer the brain is deprived of the oxygen it needs, the higher the risk for more permanent brain damage.

Excerpted from the Brain Injury Association of Virginia: Opioids and Brain Injury, 2018.

TREATMENT STRATEGIES

A number of treatment models for addressing substance use/misuse have been proposed. Best practices for treatment of substance use/misuse within the brain injury population include:

- Abstinence
- Patient and family education
- Incentives to encourage participation and retention in programs
- Modification of Alcoholics Anonymous (AA) and Narcotics Anonymous (NA) to make it more concrete and understandable
- Use of motivational interviewing techniques
- Interventions that support adaptive coping
Use of community resources to maximize social interaction and minimize boredom

Matching materials and interventions with cognitive deficits stemming from injury

Treatment for substance use disorders should be integrated into the treatment process as seamlessly as any other form of brain injury therapy and counseling. Other common rehabilitation strategies include:

- Small groups
- Journaling
- Role-play
- Presenting information in smaller chunks with repetition to allow for delayed processing time

**FEDERAL & STATE AGENCIES**

**FEDERAL**

INTEGRATED MEDICATION-ASSISTED TREATMENT (IMAT)

Individuals with substance use disorders may benefit from integrated medication-assisted treatment which combines talk therapy (either individual or group counseling) with medicines that can control cravings and lessen withdrawal symptoms. The medicines help a person feel normal again so they can focus on therapy and help rebuild their life. This therapy can continue as long as medically needed. The medicines that are used are:

- Buprenorphine (pronounced byoo-pre-nor-feen), also called suboxone
- Methadone (available only at a methadone clinic)
- Naltrexone (nal-trek-sohn)

The IMAT program helps patients get the care they need, close to home. Patients who need intensive services can get care by providers with special addiction training. More stable patients can get their IMAT treatment at primary care offices by doctors and behavioral health clinicians. If a patient’s condition worsens, they can switch back to intensive care for more help until they become healthier and ready to
return to receiving care at a primary care office.

VA MAINE HEALTHCARE SYSTEM

In addition to Togus VA Medical Center, 11 Community Clinics are found throughout the State of Maine. These provide the most common outpatient services, including health and wellness visits, without the challenges of visiting a larger medical center. A list of locations will be found at: www.maine.va.gov/locations.

SCREENING FOR TRAUMATIC BRAIN INJURY (TBI)

It is essential that service members and veterans are screened for TBI as early as possible; because TBI becomes more difficult to treat the longer the condition goes unscreened and the complexity of diagnosing TBI and Post-traumatic stress disorder (PTSD) become more challenging to distinguish.

To identify veterans who may have TBI, VA medical facilities have implemented a computer-based screening tool and require providers at VA medical facilities to use the tool to screen all veterans, including all Operation Enduring Freedom/Operation Iraqi Freedom/Operation New Dawn (OEF/OIF/OND), who present for outpatient health care.

APPENDIX A

SELECTING AND MONITORING BRAIN INJURY SERVICES

Questions To Make Informed Decisions and Monitor Brain Injury Services

The questions below may not apply to all programs or service providers in all settings. BIAA encourages you to select those questions that make sense for your particular situation. There may be other questions you feel are important as well, so add them. Write down the responses you get. Ask the same questions of each program or service provider you are considering, and then compare the responses. If you need more information or something is not clear, do not hesitate to ask.

Please do not be concerned about the amount of time it may take you to ask the questions you have selected. Selecting a program or service that meets your needs is important. Monitoring services once they have begun is also important. Refer to this guide from time to time and reflect on how well the program staff or service provider is doing what they said they would. Ask questions you did not consider during the selection process but which become important as things progress. Remember, information is power.

IN-PATIENT MEDICAL AND REHABILITATION PROGRAMS

Discharge Planning

Planning for discharge must begin at admission. It is imperative to have an understanding of what the next step is after discharge, as well as what kinds of services might be needed and their availability. Be clear about your intent to be involved in discharge decisions. As with other information, it is important to get discharge planning commitments in writing. It is virtually impossible for anyone to tell you the particular level of recovery that will be achieved. They can, however, commit to what they will do to achieve maximum recovery.

☐ What are all the possible options after discharge?
What is the role of the person with brain injury and their family in decisions about discharge?

Where do you think the person will go after discharge?

How and who decides when the individual is ready for discharge? What would make the program extend or shorten the anticipated discharge date? If this is done, how much notice is given, and what is the role of the individual and their family in this decision?

What if a person decides to leave the program with or without advance notice?

How does the program help research discharge options? Who does this?

What kinds of follow-up after discharge are provided to the person with brain injury? What kinds of follow-up are offered to the family? Why is follow-up offered? How long is follow-up offered? What are the charges for this service and who generally pays?

What is the average length of stay? What is the length of stay you expect for me/my loved one? How is that determined?

How do I get a complete set of records for my files upon discharge? Is there a charge for this? How much does this cost and who pays?

Where are people with brain injury the program served in the past?

What happens if the place the person is expected to go after discharge falls through?

What happens if it appears the person has no discharge options except with family, and the family is unable to provide the care or supervision needed, or for any other reason they feel they are not a viable discharge option?

What does the program do to locate affordable community housing with a package of supports provided by a variety of state and community agencies to afford the individual the opportunity to live independently (i.e. transportation, recreation, vocational, educational and/or personal assistance)? How does the program assist in identifying and coordinating with community service providers?

QUESTIONS APPLICABLE TO ANY PROGRAM/SERVICE/SERVICE PROVIDER

Financial Responsibilities / Arrangements

People with brain injuries have had to leave programs or service providers before they are ready because their funding has been exhausted. Large unexpected bills for brain injury services have surprised many people and dramatically changed their financial stability and status. The best way to prevent these occurrences is to stay informed about your continuing financial status both with the program or service provider and with any funding source(s) you have available.

What is the daily cost of the program?

What does this include (e.g., room and board, meals, medications, physician services, therapy, transportation)?

What services are billed as extra (e.g., telephone, laundry)?

How are charges calculated (e.g., per diem, per unit)?

What sources of funding does the program accept?

What agreement does the program have with my funding source?

What do I need to do to get copies of all correspondence (including bills submitted and payments rendered) between the program and my funding source?

Who is billed for services my funding source will not pay for? What happens if the second source does not pay?
Am I (or is my insurance) billed for services that are planned or scheduled but not provided (e.g., if a therapy session or appointment is missed)?

How do home visits or other leaves of absence affect payment? Is there a bed hold charge? If so, who is expected to pay if insurance will not?

What assistance does the program offer to determine which other public or private insurance and financial benefits the individual may be eligible for? How will they help you apply and follow the application process for these?

Admission Planning

What are the rights and responsibilities of people participating in this program? How does the program or service provider inform the individual of these? May I have a copy?

How do you make decisions about who to admit into the program or service? What are the eligibility criteria?

How will you get previous medical and other important (i.e., school) records and other information you may need in order to make this decision?

I would like a proposed service or treatment plan before I decide. How can I get this?

How do you involve the program or service I am in now in the admission and transition process? Be specific.

If I choose this program or service, what do you need to do prior to admission? How long will that take? What do you need me to do?

How can I arrange to spend some time observing the program? Note that depending upon the nature of the facility, program or service, this may not be possible given the patient confidentiality provisions of HIPAA, the Health Insurance Portability and Accountability Act of 1996.

What is your understanding of the role my funding source has in the decision-making process about the program or service I select?

What forms or contracts will I be expected to sign prior to admission or starting the service?

How can I get a copy of each to read thoroughly before I sign?

Involvement with Family and Friends

The active involvement of family members and friends is often a key component to achieving maximum success. Depending upon the individual with brain injury’s status and wishes, the type and location of services being received and other factors, more or less active involvement by family members and friends may be allowed.

Assuming you have appropriate HIPAA releases where needed, how does your program or service involve family members and friends?

How are family members and friends involved in progress meetings? How will we be informed enough in advance so we can plan to participate? Will there be a specific contact person for regular communication with me?

What do I need to do to get copies of written reports regularly? Who is responsible for sending me these?

How will you schedule regular conference calls for me to speak with the direct service providers if I cannot personally attend an in-person meeting?

If I have a question about a particular area (e.g., physical therapy), what do I need to do to speak with that therapist directly?

What kind of family training, support groups and/or therapy is offered? Is there a charge for participation?
Since I live far away, what overnight arrangements are made for me to visit for a few days? How about for the person’s friends?

What arrangements are made for staff to explain services and reports to me in non-technical terms?

What is your policy about visitors?

What arrangements are made if we wish to have conjugal visits?

Legal Considerations

How does a legal settlement affect the program’s expectations about payment?

Has the program ever recommended guardianship, conservatorship or representative payees for people being served? Has the program ever recommended that these are no longer needed? If yes, what assistance is provided to the individual, family members or friends who choose to pursue the recommendation?

Is the program licensed, accredited, or certified? By whom? How can I contact them to learn more about what they require for licensing? Can I see the license?

When was the last state or local inspection and what were the results?

Is the program CARF brain injury accredited? Any other CARF accreditation? When was the last survey?

Is the program accredited by the Joint Commission? At what level (1 year, 3 year, type 1)? When was the last survey?

What recourse does the person being served have if they question or disagree with the quality or necessity of services being provided?

What recourse do family members and friends have if they question, or disagree with the quality or necessity of services received?

What provisions are made for personal banking services? Where do you keep money that belongs to people being served in your program? How do you account for money which is put into your program’s care and who is responsible for this accounting?

PROGRAM

Every component of every program or type of brain injury service is not addressed here. For example, specific questions about physical therapy or neuro-optometric services are not included. The components below are those which tend to have broad implications, that is, to touch more than one specific discipline, often simultaneously. You will also wish to ask questions about the philosophy and methodology used in specific disciplines that are central to the services needed in your individual situation.

Observations about aesthetics:

Are the facilities clean?

Are people being served clean and dressed in a manner you are comfortable with? Do they appear to be well cared for?

Does the staff seem attentive? Do they know people by name? Do they seem to care genuinely about people in the program?

When food is part of the program/service is the food appealing? How does the program accommodate special diets, personal preferences, or requests for a different meal schedule? Is there any charge for this?

Do people being served seem comfortable with the way they are being treated?
Experience with people with brain injuries:

☐ How many people with brain injuries has the program worked with in the past year? How many total individuals have they served?

☐ What is the average staff turnover rate? Do they recruit people who have experience in serving people with brain injury? What staff training is provided? How many ACBIS Certified Brain Injury Specialists (CBISs) are on staff?

☐ How long has the program been in existence? When did it begin to serve people with brain injury? Why was it established?

Program administration and organization:

☐ Who is responsible for the overall supervision of the services rendered to people served? How often are they at the program? How much direct contact do they have with individual people served?

☐ What types of people will be working directly as part of the team?

☐ How does the program integrate the individuals expressed desires and goals in service planning? For example, if an individual dislikes cooking and will not be expected to cook at home, is cooking an expected program component? If it will take a person three hours to feed himself/herself and he/she determines it is a waste of energy preferred to use another way, how will the program support this decision, and what assistance will be provided to find ways to have feeding done by someone else – both at the program and at home?

☐ Is there a consistent schedule for an individual’s day? What involvement does the person have in directing the schedule and selecting the program components?

☐ What do people generally do during unscheduled times?

☐ What is the evening schedule?

☐ What is the weekend schedule?

☐ How is the need for specialized adaptive equipment identified? How is the equipment provided and paid for?

☐ What access do people being served and their families have to their records? If I wanted to see my record now, what would I have to do? What recourse do I have if I disagree with something in the record?

Medical services/medications:

☐ Who is responsible for providing medical services? What is their background? Is the same person available at different times, or are multiple medical practitioners used?

☐ How is my personal physician included in providing medical services while I am in the program?

☐ How does the program handle medical emergencies?

☐ How are routine medical issues (i.e., regular dental and ophthalmology services) provided?

☐ How would the program manage the special medical needs which have resulted from the injury?

☐ I have heard that people can have trouble with bedsores. How does this program avoid or prevent this?

☐ What is the policy for the use of psychotropic or other mood-altering medications? What role does the individual have in these decisions? What does the program do if they decline, against medical advice? Does the program utilize the services of a neuropsychiatrist?

☐ Who monitors medications and medication interactions? How often is this reviewed? What steps are taken to assure that therapeutic levels of medications are maintained and not exceeded?
PROGRAM COMPONENTS

**Cognitive services:**
- What approaches does the program use to address cognitive strengths and limitations?
- Is neuropsychological testing done? How much emphasis is placed in test reports on recommendations to build on an individual’s cognitive strengths? How much emphasis is placed on reporting test scores and the person’s limitations? When is retesting conducted?
- If a “cognitive therapist” or “cognitive remediation specialist” is a member of the team, what particular qualifications do they have?

**Behavioral interventions:**
- What approaches does the program use to address behavioral concerns? What role do the individual and their family play in determining the types of behavioral interventions used?
- What steps does the program take to assure that behavioral interventions are clearly understood by all staff and that the plan is being implemented consistently (even in the middle of the night)?
- How is the effectiveness of behavioral interventions measured?
- What role does medication play in “behavior management?”
- Are physical restraints used? If so, under what circumstances? What policies or protocols exist for the use of physical restraints? May I see a copy of these?
- Is a “secure” or locked unit available? When does the program recommend the use of these? Who decides when a person is ready for an open unit after being on a secure unit? How?
- At what point is an individual’s behavior deemed unacceptable to the program? How much notice does the program give the individual and their family? What efforts are made by the program to assist in locating a comparable program that can better meet the needs of the person?

**Vocational services:**
- What is the extent of vocational services provided by the program?
- How are situational vocational evaluations conducted? How are job trials, training or placement provided? How are job coaches used? For how long?
- What interface is there between the program and state vocational rehabilitation services?

**Educational services:**
- What educational services are offered? To children? To college students? To adults?
- Does the program have a teacher on staff with expertise in educating children and adolescents with brain injury?
- What is the interface between the program and the person’s school?

**Community Re-entry:**
- What components of the program take place in the community? How frequently is the individual in the community?
- How are the person’s ability to get around and to use community services and resources evaluated and addressed?
- What local resources are used by the program to address the needs of the individual?
- How does the program accommodate an individual’s request to participate in community activities (e.g., AA or league bowling)?
- What outreach does the program do to help educate the community about brain injury and its consequences?
What does the program do to learn about the individual's home community and to identify resources and contacts there? What linkages are made with these resources and contacts prior to discharge? Are any of these contacts part of any discharge planning? Is there any follow-up once discharge has occurred?

What efforts are made to work with the person in their home, even if the program is “facility-based”? How often can this be expected – once for evaluation only or multiple times to prepare the person for the return home?

What is the connection between the program and the local Independent Living Center?

Recreation:

How does the program accommodate the individual’s continued involvement in recreational interests and activities? Are modifications of activities or equipment suggested, and opportunity for situational exploration of the effectiveness of modifications included?

What does the program do to support the individual’s desires to become active in new recreational pursuits?

How does the program help the individual identify ways to participate in recreation and social opportunities in their community?

What connection does the program have with: the local recreation department, community therapeutic recreation services, social support and activity groups or other community resources?

APPENDIX B

GUIDE TO SELECTING LEGAL REPRESENTATION

People who sustain brain injuries from vehicle crashes, medical malpractice, falls, defective products, or other incidents caused by another person’s carelessness often find it helpful to talk to an attorney. Medical treatment, such as rehabilitation, and long-term care services can be expensive and span many years.

Pursuing the corporation or the individual that caused a brain injury is a way to ensure justice and accountability. A lawsuit can also provide additional financial resources to aid with rehabilitation and long-term care if the injury causes a permanent disability. Sometimes a lawsuit will encourage the responsible party to take steps to prevent injuries to others in the future.

Consider an Attorney Soon After the Injury Occurs

It is important to contact an attorney as soon as possible after a person is injured. An attorney can determine whether or not the plaintiff has a case.

The plaintiff is the person bringing the suit. The plaintiff can be the injured person or the family (or estate) of the injured person.

The defendant is the party or parties that caused the brain injury. One of the most important reasons to get legal help is the difficulty of determining who is legally responsible for the injury. In a motor vehicle crash, the driver of an automobile, his employer, the automobile manufacturer, the local government or its employees, and the bartender at a local bar could all be liable.

An attorney can investigate the case, determine what kind of case to bring against which defendant, and begin preparing the case while the injured person and his or her family focus on rehabilitation and recovery.

A good lawyer will work to make sure someone with a brain injury receives full compensation for his or her injuries.

Choose Your Attorney Carefully

Choosing an attorney can have significant long-term implications. The attorney will seek to obtain full compensation for medical bills, lost income, and future care costs. The attorney may also seek damages for pain and suffering. Importantly, an experienced attorney can help to preserve any entitlements to
federal and state benefits. Without careful planning, valuable benefits may be lost.

Choosing an attorney requires consideration of many factors, including education and training, knowledge of the consequences and treatment of brain injury, knowledge of how to structure and manage awards, and experience with similar cases. An attorney must have the financial resources to try the case as well as access to the best experts.

**Attorneys Also Choose Their Cases Carefully**
Most personal injury attorneys work under a contingent fee arrangement. This means the attorney receives no fee if the plaintiff is not compensated. Attorneys will often invest substantial time and money during the investigation, preparation, and resolution of the case. Because of the financial risk involved, attorneys may decline cases if they do not believe there is a reasonable likelihood of success.

**Getting Started**
Most brain injury attorneys offer a free consultation. If they take your case, there is no attorney’s fee if there is no compensation.

Once you have an appointment with an attorney, be prepared to answer the attorney’s questions about the injury. You may also find it useful to have a written list of questions to ask the attorney.

During the consultation, you will want to ask about the attorney’s legal background and experience with cases involving brain injury.

Be observant during the time you spend with your attorney. Pay attention to how the attorney and his or her office staff interact with you and your family, and determine if it is comfortable for you. Trust your instincts. Many personal injury cases take years to resolve, so the relationship between you and the attorney can be very important.

**Here are some questions you may want to ask:**
- How much of your practice is devoted to personal injury?
- Of your personal injury cases, how many are devoted to brain injury?
- How did you first become involved in brain injury cases?
- Based on the information you have, what are the strengths and weaknesses of my case?
- What additional information about my case do you need?
- Who else in your practice would you involve in my case? What role(s) would these people have? Describe their background and expertise.
- Who will be my primary contact with your practice?
- Are you or your law firm able and willing to advance as much as $50,000 in the investigation, preparation, and presentation of my case?
- Have you been successful handling cases similar to mine in the past?
- What is your involvement with legal associations, local, state, or national brain injury associations, or other organizations?
Roadmap to Becoming a Certified Brain Injury Specialist

1. Verify that you meet the eligibility requirements
2. Register for an ACBIS account
3. Submit the application and pay the fee
4. Self-study or attend an official ACBIS training
5. Identify a proctor and schedule your two-hour exam
6. Take the online exam and receive your score immediately via email
   Note: If you fail the first attempt, you can take the exam again within your one-year eligibility period
7. Pass with 80% or higher and get certified!

Who Can Become a Certified Brain Injury Specialist (CBIS)?

- OTs, PTs, SLPs
